

Sending a Secure Delivery from the IHS Secure Data Transfer Service

About the IHS Secure Data Transfer Service

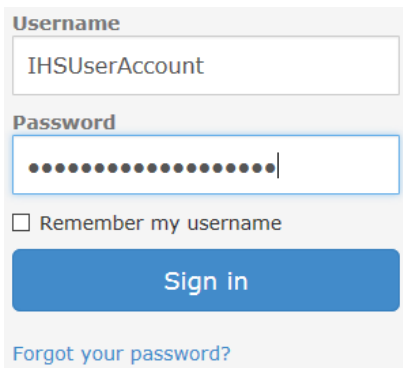

The **IHS Secure Data Transfer Service (SDTS)** allows IHS employees to exchange data, including messages and large files, securely with recipients inside and outside of the IHS network.

This technology enables recipients to receive and view secure data in a Web application, after they have completed a one-time registration process. The PDF document, **Accessing the IHS Secure Data Transfer Service**, explains the registration process, and can be utilized by all non-IHS contacts to whom you need to send encrypted e-mail or large files.

Sending Secure Data

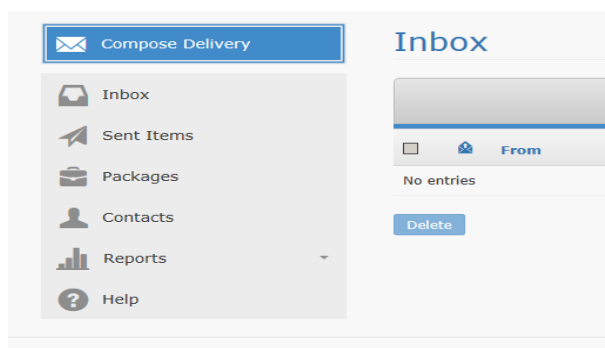

All IHS users can use the Secure Data Transfer Service. To send a secure data package, do the following:

1. Go to the IHS SDTS website at <https://securedata.ihs.gov>

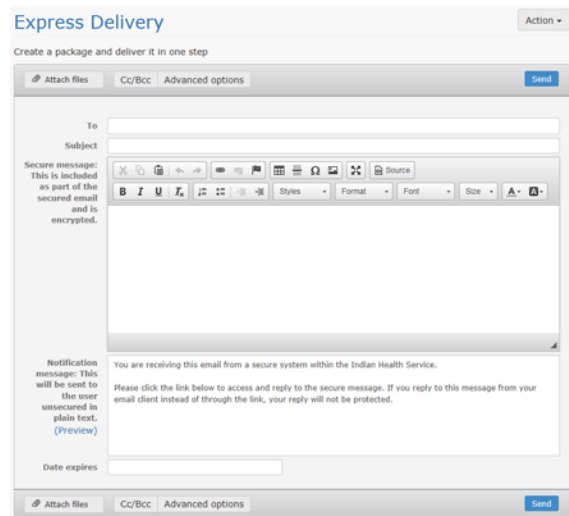

2. Enter your IHS D1 domain username and password, and click **Sign in**.
3. To send a one-time encrypted e-mail, click **Compose Delivery**.

NOTE: Use the **Packages** section to send messages/data repeatedly.

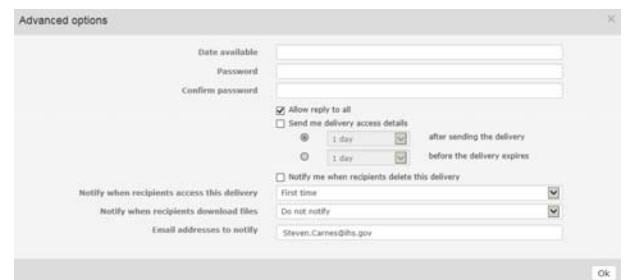

4. Fill out the message details as you would for regular e-mail and attach any files you would like to send using the **Attach files** button.

5. To see all available delivery options, select the **Advanced options** button.
 - a. **Date available:** Lets you specify when the message can first be accessed by the recipient.
 - b. **Password/Confirm password:** Lets you specify a password to use on the message independent of requiring the user to log in to view a message in order to add another layer of protection to the delivery.
 - c. **Allow Reply to All:** When selected, the recipients of the delivery can reply to all recipients. When unchecked, recipients can only reply back to you

The remaining options control notification options regarding the delivery you are sending and are self-explanatory.

6. Click **Send** to send the message. If you attached a file, an upload process will begin. You are prompted to optionally save the recipients of the message to your SDTS contacts list.
